Project Data Dictionary: Lumen Beauty full Sep-Nov 2026 operations export

Contents

`lb_streams.csv`: one row per livestream session 1

`lb_order_lines.csv`: one row per stock keeping unit line in an order 2

`lb_users.csv`: one row per registered user 3

`lb_comments.csv`: one row per comment posted during a stream 3

`lb_follows.csv`: one row per follow or share event 4

Five comma-separated values (CSV) files, exported from Lumen Beauty's Douyin seller dashboard on 2026-11-30, covering the brand's full first quarter of operations (2026-09-01 to 2026-11-30). This is the course project dataset described in the Group Project Brief; it extends the small September teaching slices used in Week 2 to the store's complete operations for the period.

The five CSVs live in the `data/` folder of the project kit: `lb_streams.csv`, `lb_order_lines.csv`, `lb_users.csv`, `lb_comments.csv`, `lb_follows.csv`.

How the tables fit together:

- `lb_order_lines.stream_id` -> `lb_streams.stream_id` (livestream orders only)
- `lb_order_lines.user_id` -> `lb_users.user_id`
- `lb_comments.stream_id` / `lb_comments.user_id` -> streams / users
- `lb_follows.src_user` -> `lb_users.user_id`; `dst_id` references a streamer, the store account, or another user depending on `dst_type`

Monetary values are in Chinese yuan (CNY). Dates use ISO format (YYYY-MM-DD). Empty fields mean "not applicable" (e.g., a store-shelf order has no `stream_id`).

`lb_streams.csv`: one row per livestream session

78 sessions, 2026-09-01 to 2026-11-30. The brand streams every day except Sunday. Session-level metrics as shown on the streamer dashboard.

Column	Type	Unit	Meaning
`stream_id`	label	n/a	Session identifier, S01-S78, in calendar order
`date`	label	YYYY-MM-DD	Stream date
`weekday`	label	n/a	Day of week (English day name)
`start_hour`	numeric, discrete	hour (24h)	Hour the stream went live

Column	Type	Unit	Meaning
`streamer_id`	label	n/a	Host streamer, T01-T02 or M01-M04
`streamer_tier`	label	n/a	Platform follower tier of the host: `top` or `mid`
`event_night`	numeric, discrete	0/1	1 if the stream ran on a platform or brand campaign night
`duration_min`	numeric, discrete	minutes	Length of the stream
`viewers`	numeric, discrete	people	Total viewers over the session
`peak_concurrent`	numeric, discrete	people	Peak concurrent viewers
`n_comments`	numeric, discrete	count	Comments posted during the stream (see `lb_comments`)
`n_shares`	numeric, discrete	count	Times viewers shared the stream (see `lb_follows`)
`gmv`	numeric, continuous	CNY	Gross merchandise value sold while the stream was live

`lb_order_lines.csv`: one row per stock keeping unit line in an order

4,920 lines. Every order placed with the store in the window, at line-item detail: one order containing two stock keeping units (SKUs) appears as two rows with the same `order_id`.

Column	Type	Unit	Meaning
`order_id`	label	n/a	Order identifier, O00001 up, in chronological order
`user_id`	label	n/a	Buyer, U0001-U1000 (see `lb_users`)
`sku_id`	label	n/a	Product identifier, LB01-LB30
`sku_name`	label	n/a	Product name
`category`	label	n/a	One of Serum, Cream, Mask, Cleanser, Toner, Eye Care, Lip, Sunscreen
`qty`	numeric, discrete	items	Units of the SKU in this line
`unit_price`	numeric, continuous	CNY	Actual price paid per unit in this line. Livestream transaction prices reflect per-stream promotions and can sit modestly outside the catalog list band (0.55x-1.15x of list)

Column	Type	Unit	Meaning
`channel`	label	n/a	`livestream` (ordered while a stream was live) or `store` (shelf order)
`stream_id`	label	n/a	Session the order was placed in; empty for store orders
`order_date`	label	YYYY-MM-DD	Order date

`lb_users.csv`: one row per registered user

1,000 users registered with the store's mini-program, with their activity summary over the full window.

Column	Type	Unit	Meaning
`user_id`	label	n/a	User identifier, U0001-U1000
`first_channel`	label	n/a	Channel through which the user first arrived: `livestream`, `short_video`, `search`, or `ad`
`age_band`	label	n/a	Self-reported age band: `18–24`, `25–34`, `35–44`, `45+`
`city_tier`	label	n/a	City tier of the shipping address: `T1`, `T2`, `T3+`
`first_order_date`	label	YYYY-MM-DD	Date of first order; empty if the user never ordered
`last_order_date`	label	YYYY-MM-DD	Date of most recent order; empty if the user never ordered
`n_orders`	numeric, discrete	count	Distinct orders placed in the window (0 if none)
`spend_total`	numeric, continuous	CNY	Total spend in the window (0 if none)
`high_value`	numeric, discrete	0/1	1 if the user is in the top 20% of buyers by `spend_total`

`lb_comments.csv`: one row per comment posted during a stream

10,866 comments. The raw comment feed across all sessions, with the platform's automatic sentiment label.

Column	Type	Unit	Meaning
`comment_id`	label	n/a	Comment identifier, C00001 up, fully chronological: ids increase with stream date and with seconds into the stream
`stream_id`	label	n/a	Session the comment was posted in (see `lb_streams`)
`user_id`	label	n/a	Commenting user (see `lb_users`)
`sec_into_stream`	numeric, discrete	seconds	Time of the comment, measured from stream start
`text`	label	n/a	Comment text (short, English)
`sentiment`	label	n/a	Platform auto-label: `positive`, `negative`, or `neutral`

`lb_follows.csv`: one row per follow or share event

3,020 events. The store's social-graph log: users following a streamer or the store account, and users sharing a stream to another user.

Column	Type	Unit	Meaning
`src_user`	label	n/a	User who followed or shared, U0001-U1000 (see `lb_users`)
`dst_type`	label	n/a	Target kind: `streamer`, `store`, or `user`
`dst_id`	label	n/a	Target identifier: streamer ID, `LUMEN` for the store account, or a user ID
`edge_type`	label	n/a	`follow` or `share`
`stream_id`	label	n/a	Session during which the event happened; empty for store follows
`date`	label	YYYY-MM-DD	Event date

Source: synthetic dataset. Lumen Beauty is a fictional skincare brand created for this course; any resemblance to a real company is coincidental. The files were produced by a fixed-seed generator script (`generate_project_data.py`, seed 20261022), available to instructors on request, so the dataset can be regenerated exactly.
