Group Project Report: Template

Contents

Cover block 1

How to use this template 1

1. Problem & what it is worth: ***about 1-1.5 pages*** 2

2. Data: ***about 1.5-2 pages*** 2

3. Method & assumptions: ***about 1.5-2 pages*** 2

4. Findings: ***about 2.5-3.5 pages*** 2

5. Recommendation: ***about 1-1.5 pages*** 2

6. Ethics & compliance implications: ***about half a page, required*** 2

7. Artificial intelligence (AI) use appendix: ***about half a page, required*** 2

Submission checklist 2

Course: New Media Technology and Analytics (20001920076) ·**Fall 2026** ·Group project report *Replace every <…> and remove the guidance blocks: what remains is your report. Governing documents:* `project_brief.md`, `project_rubric.md`, `ai_use_policy.pdf`. *Submit the report with the final notebook and each member's peer evaluation.*

Cover block

Field	Fill in
Team number	<1-12>
Members	<full names of all team members>
Question ID	<Q1-Q17 from `project_question_menu.md`, or your confirmed own question>
Date	<2026-11-26>

How to use this template

- Aim for **8-12 pages**, written for executives. A non-technical reader (the brand's founder) should finish §1 and §5 knowing what to do next.
- **Interpretation over implementation.** The report makes a business argument; the code lives in the notebook. Never paste raw code into it.
- The page budgets below are indicative. The total is what is enforced.
- Delete every *guidance block* (the italic prompts like this one) before you submit.

1. Problem & what it is worth: *about 1-1.5 pages*

The question, whose question it is, and what the answer is worth, quantified in Chinese yuan (CNY), users, or risk. One tight paragraph outperforms three vague ones; "getting this wrong costs the store ¥X per month" sharpens everything that follows.

<…>

2. Data: *about 1.5-2 pages*

The tables you used from the course project dataset (or your approved own data, with its source and license), the key fields, and every cleaning choice you made: duplicates, missing values, unit errors, outliers. Include the one table or chart that makes the business question visible in the data. Cite `project_data_dictionary.md` *where it matters.*

<…>

3. Method & assumptions: *about 1.5-2 pages*

The method family from Weeks 3-8 that you used, and why it suits this question. State the assumptions ***before*** *the results (support and confidence thresholds, the train/test split, a sensible k, a fair comparison group) and whether your data meets them. One method executed well beats three handled loosely.*

<…>

4. Findings: *about 2.5-3.5 pages*

Effect sizes, not just significance: "event nights lifted gross merchandise value (GMV) per viewer by X%", not "$p < 0.05$". Every figure in this section must be reproducible from your notebook with Restart & Run All, and be candid about what the data cannot tell you.

<…>

5. Recommendation: *about 1-1.5 pages*

The action the manager takes on Monday morning: who does what, how large the effect should be, and where it stops. Close on the decision, not the model.

<…>

6. Ethics & compliance implications: *about half a page, required*

What your topic and your analysis imply for privacy, algorithmic bias, and misinformation, on the platform you studied, not in general. Name the stake, say who bears it, and tie at least one safeguard to your recommendation.

<…>

7. Artificial intelligence (AI) use appendix: *about half a page, required*

Per `ai_use_policy.pdf`*: name each tool and the parts it touched, one or two sentences per item, then close with the confirmation sentence, verbatim:*

<your disclosure sentences…> *Every member of this team can explain every line of code and every number in this submission.*

Submission checklist

- ☐ Cover block complete: team number, members, question ID, date
- ☐ Within the 8-12 page limit; every guidance block removed

- ☐ Notebook passes Restart & Run All (Python) or runs top to bottom cleanly (Stata)
- ☐ Every number in §4 reproduces from the notebook
- ☐ Ethics & compliance implications (§6) name the stakes of this topic, not ethics in general
- ☐ AI-use appendix closes the report
- ☐ Each member's peer evaluation (`peer_evaluation_form.md`) ready to submit with the report
- ☐ A non-technical reader finished §1 + §5 and can retell the recommendation
